CSSK, the Corrosion Science Society of Korea is extremely proud to host the most important international event in the field of corrosion – 19th ICC. The event will take place in Korea at ICCJEJU (International Convention Center Jeju), located in the beautiful seaside resort of Jeju Island.

Jeju, Korea

Jeju is proud of its unique cultural folk heritage as well as its geographical and historical relevance. The island itself is an extinct volcano with its peak jutting skyward at the center and a broad, gentle littoral all the way around, a very unique geographical condition. There are bountiful forests and ravines, fantastic rock formations and volcanic craters, and caves and grasslands that together paint a natural scene of breathtaking beauty. Sparkling seas and tiny islets surround Jeju, with jutting rocks set amidst sandy beaches to create a magnificent view virtually everywhere you look.

In June 2007, the volcanic island and lava tube cave systems were designated as UNESCO World Natural Heritage Sites for their natural beauty and geographical value. Jeju Island is not only Korea’s most prestigious destination and top honeymoon location but it has been the venue for several political joint summit talks and other major international meetings.

Jeju is now the place with designations of UNESCO’s Triple Crowns– Biosphere Reserve in 2002, World Natural Heritage in 2007, and World Geoparks in 2010.
